Memory

memory store

- task notes
- past experience
- state / trace

retrieved context

- guidance for later decision
- relevant history

Orchestration

- choose executor
- bind arguments
- decide continuation or handoff

Monitoring & Recovery

Monitoring

- runtime status
- progress
- completion / failure

Recovery

- retry or continue
- switch executor or re-ground
- replan or reset

Task / Goal

Pick up the blue object from the drawer and place it on the table.

Evidence & Context

- current observation
- robot state
- task information
- retrieved context

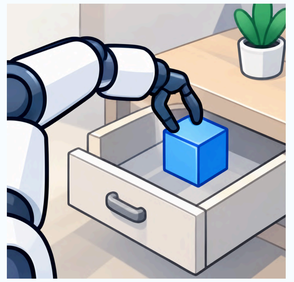

Decision & Dispatch

- selected component
- bound arguments
- execution mode

Exposed Executors

- policy
- primitive
- solver
- callable skill

Robot Execution

execution feedback

- progress
- success
- failure

Skills

skill specification

- goal
- precondition
- actions
- success condition

behavior encoding

- policy, program or state machine

callable skill

- validated skill added to the executor set

Infrastructure

service layer

tool / policy endpoints

interface & serving

API, routing, versioning

gating

checks, permissions, or contracts

Layered Systems

planner	high-level reasoning, slower rate
learned policy	reactive behavior, mid rate
analytic control	solver / controller, fast rate
